

# TPMS SERVICE KITS

## WHY TPMS-SERVICE KITS?

When a tyre is replaced on a vehicle without TPMS, it is normal to replace the rubber valve. In the case of a direct TPMS system, some components of the sensor must also be replaced. Every time a tyre is replaced, the suitable TPMS Service Kit must be used to replace the wear parts (nut, O-ring, nickel plated valve core, cap). This ensures safety, prevents breakdowns and avoids larger and more expensive consequential damages (For example a complete replacement of the sensor because the valve core is stucked by corrosion).

## WHY HOFMANN POWER WEIGHT?

- **More than 85 % vehicle coverage**  
Carefully selected Service Kits cover most European new vehicles from 2014 on.
- **Highest OE-quality**  
Spare parts in OE quality guarantee best work results and maximum reliability even under extreme conditions.
- **Latest corrosion protection technology**  
All metal components are treated with the latest corrosion protection technology for highest demands.
- **Reduced stock-keeping**  
Demand-optimized box filling for efficient warehousing.

TPMS STARTER KIT

The TPMS Starter Kit provides a wide assortment of common service kits. With this choice of service kits, over 85% of all European new cars can be covered. The amount of the single service kits has been defined according to the market demand.

A diagram showing the components of a TPMS Service Kit. It includes a valve nut (1), a valve cap (2), a valve core (3), a seal (4), and a set of O-rings in four colors (5). The components are numbered 1 through 5 in red circles.

A TPMS SERVICE KIT  
USUALLY CONTAINS  
THE FOLLOWING  
COMPONENTS:

- 1 Valve nut
- 2 Valve cap
- 3 Valve core
- 4 Seal
- 5 Some Service Kits also include O-rings in 4 different colours\*

\* The position of the O-Ring is on the outside of the nut. Each colour describes the position of one wheel. The combination of the position of the wheel and the colour of the O-ring is as follow:

Green = Front left  
Yellow = Front right  
Red = Rear left  
Black = Rear right

# TPMS PRO

HOFMANN POWER WEIGHT also provides advice and support to its customers online. To help garages and distributors in their daily work, HOFMANN POWER WEIGHT created a new website called TPMS-PRO. TPMS-PRO is a product finder which is continually updated to find fast and easy what replacement TPMS sensor or service part is required for every TPMS fitted vehicle sold in Europe. Furthermore, the website is providing useful information around TPMS.

A direct TPMS system consists of 4 battery-operated sensors (mounted on the valve), a receiver and a display. The sensors measure the tyre pressure and the temperature and send this information in real time to the electronic control unit (ECU). If too little pressure is measured, the system warns the driver of the vehicle via a low-pressure warning light on the display.

## PRODUCT FINDER

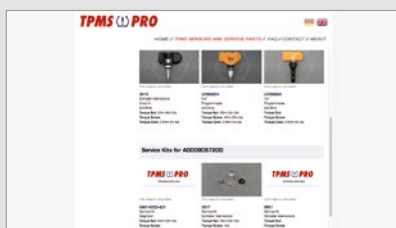

### STEP 1:

- Please enter in your browser „www.tpms-pro.com” and click on the button „TPMS SENSORS AND SERVICE PARTS”.

### STEP 2:

- Please enter your vehicle of interest (brand, model, year) and click on the button „SEARCH”.

### STEP 3:

- Now all suitable TPMS replacement sensors and the respective TPMS Service Kits are listed with manufacturer part numbers.
