with reliability

ALLIGATOR DS-P valve cap

Checking air pressure and filling made easy,
no unscrewing of the valve cap necessary

The valve cap saves time and money.

Now also available for rubber, metal and aluminium valves for car, transporter, commercial vehicle and bicycle wheels. Not for motorcycles with valve in the direction of the centrifugal force!

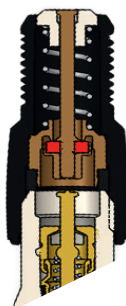

The DS-P valve cap

- ... saves time
- ... saves money
- ... prevents dirty fingers
- ... does not get lost
- ... assures increased safety
- ... is suitable for rubber, metal and aluminium valves for car, transporter, commercial vehicle and bicycle wheels

The DS-P valve cap on CVV_{Easy} A clever combination

The CVV_{Easy} is a brilliant alternative to screw-type valves that are difficult to install in the appropriate length when the valve hole does not offer a sufficient contact surface or difficult geometries on the wheel make the use of an installation tool impossible.

In combination with the new DS-P valve cap, the CVV31 has a total length of 47 millimetres. As a result, it enables pressure checks and adjustment without unscrewing the valve cap and it is outstandingly suited for small transport vehicles and caravans.

Part no.	Description	PU
330770	DS-P valve cap	50 pcs
530060	CVV _{Easy} valve + DS-P valve cap	100 pcs
